

Cardiac myosin -- per-target connectivity detail (consistent with Table B.2)

BEST - WORST (red = best transports more)

top-5 predicted x active-site (2/5 in drug pocket)

Cardiac myosin (apo 8QYP -> holo 8QYR, drug XB2=mavacamten) N=704. C_ij = average-mixing matrix (operator-only, row-stochastic). Active site (blue): 18; allosteric/drug pocket (red): 15 (0 shared). BEST cell: H1_adj / dX dip depth (14e), AUC 0.691, P@5 0.4. Top-5: [774, 721, 407, 777, 604] -> 2/5 in the drug pocket. WORST cell: H12_anmS / -E[D] final (14d), AUC 0.262. MIN_HOP=2. Reproduced from one consistent pipeline run.

active site allosteric (drug) pocket both
